Introduction

We are a group of profoundly talented engineers with one unified culture. We are more than 50 highly skilled people working together to create long-term, sustainable value in the built environment. We value all our stakeholders as clients; our staff members, our suppliers, our shareholders and every community we contribute to in Sudan and the Middle East in the built environment.

Business Philosophy

Since its early days of inception, our leadership worked very hard in creating a strong competitive position in Sudan and the Middle East. They are always on top of the business, setting the strategic objectives to promote long term success for the group, while our middle managers implement the strategy and oversee group operations in the region.

Business Values:

- Client Satisfaction
- Environmentally Friendly
- Talent Recognition
- Best Practices

We specialise in construction management, general contracting, tenant improvement, property services and building services serving private and public clients in Sudan and the Middle East.

Services

We design, deliver, repair and operate exceptional buildings in Sudan and the Middle East, serving public and private sector clients in more than seven different sectors.

Service Categories:

Construction Management

We employ the latest project management standards to oversee the planning, design and construction of clients projects.

Tenant Improvement

We provide the best in class cost-effective building renovation approaches to meet the needs of our clients.

General Contracting

We build, refurbish and extend buildings from our network of offices across Sudan and the Middle East.

Building Services

We install the best building services that ensure maximum comfortability, functionality, efficiency and safety.

Facility Management

We deliver facility management services across Sudan by providing bespoke support services to our customers.

Every project we delivered was an opportunity for us to innovate and find better ways of doing things, saving time, saving money and connecting people to deliver above and beyond their expectations.

Fast-Track Projects

TH United has adopted its fast-tracking delivery methodology (FTDM) in many projects to shorten the overall project time frame. It's achieved by overlapping a project's initiation, procurement, design, and construction phases. Some work can be done concurrently rather than waiting for all design work to be done before construction begins.

Benefits of FTDM:

Shorter Delivery Times

Our fast-tracking delivery methodology helps to compress the overall project schedule by 30%.

Avoiding Over Spending

Time compressed is reflected in a reduced project cost by more than 30%.

Excellent Resource Utilization

Shorter projects are delivered in less time, thereby freeing up resources.

We delivered several prestigious buildings and projects in Sudan and the Middle East in different industries.

BANKING

Projects Portfolio

Bank of Khartoum - HQ2

We managed to deliver better working spaces by making the interior spaces suitable for occupation in their Head Quarters.

Client:
